Message from the Guest Editor

Dear Colleagues,

Health disparities have a profound influence on communities and individuals, shaping their overall health, wellbeing, and social dynamics. Health disparities are often deeply rooted in societal inequities related to factors such as race, ethnicity, socioeconomic status, education, and access to resources. While it is true that there have been increasing efforts to address health disparities in recent years, the persistence and complexity of these disparities present ongoing challenges. Continued research, data collection, and evaluation are essential to inform effective strategies and monitor progress in reducing health disparities.

The aim of this Special Issue is to raise awareness about the existence, magnitude, and impact of health disparities within specific populations or across various dimensions such as race, ethnicity, socioeconomic status, gender, or geographic location, to explore and deepen the understanding of the determinants of health disparities and to inform and influence policy development and healthcare practice.
